

TROPICAL CYCLONE BULLETIN NO. 9F
Low Pressure Area (formerly "MAYMAY")

Issued at 5:00 AM, 13 October 2022

THE THREAT OF HEAVY RAINFALL CONTINUES AS "MAYMAY" WEAKENS INTO A LOW PRESSURE AREA.

Location of Center (4:00 AM)

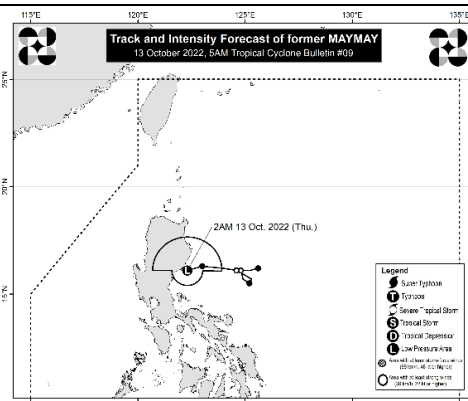

The Low Pressure Area (formerly "MAYMAY") was estimated based on all available data over the coastal waters of **Casiguran, Aurora (16.1°N, 122.1°E)**

Intensity

Central pressure of **1006 hPa**

Present Movement

West Southwestward at 15 km/h

TROPICAL CYCLONE WIND SIGNALS (TCWS) IN EFFECT

All hoisted Wind Signals are hereby lifted.

HAZARDS AFFECTING LAND AREAS

Heavy Rains

- **Today through tomorrow early morning**, moderate to heavy with at times intense rains over Cagayan, Isabela, and Apayao. Light to moderate with at times heavy rains over the rest of Cagayan Valley and Cordillera Administrative Region.
- Under these conditions and considering significant antecedent rainfall, **scattered to widespread flooding (including flash floods) and rain-induced landslides are expected** especially in areas that are highly or very highly susceptible to these hazard as identified in hazard maps, and in localities with significant antecedent rainfall. For more information, refer to the 24-Hour Public Weather Forecast issued at 4:00 AM today and the Weather Advisory #7 issued at 11:00 PM yesterday.

Severe Winds

- Despite the lifting of wind signals, **occasional gusts reaching strong to gale-force strength** associated with the enhanced northeasterly surface windflow may still be experienced (especially in the coastal and mountainous areas) over Batanes, Cagayan, Cordillera Administrative Region, and Ilocos Region.

HAZARDS AFFECTING COASTAL WATERS

- Due to the surge of northeasterly surface windflow, **rough to very rough** seas (2.8 to 5.5 m) will prevail over the seaboard of Northern and Central Luzon and the eastern seaboard of Southern Luzon. For more information, refer to **Gale Warning #8** issued at 5:00 AM today.
- **Moderate to rough seas** (1.5 to 3.5 m) over the western seaboard of Central and Southern Luzon. These conditions may be risky for those using small seacrafts. Mariners are advised to take precautionary measures when venturing out to sea and, if possible, avoid navigating in these conditions.

TRACK AND INTENSITY OUTLOOK

The remnant circulation of "MAYMAY" is forecast to track westward towards Aurora. Due to the frictional effects, this may dissipate within 12 hours.

TROPICAL CYCLONE BULLETIN NO. 9F
Low Pressure Area (formerly "MAYMAY")

Issued at 5:00 AM, 13 October 2022

Considering these developments, the public and disaster risk reduction and management offices concerned are advised to take all necessary measures to protect life and property. Persons living in areas identified to be highly or very highly susceptible to these hazards are advised to follow evacuation and other instructions from local officials. **For heavy rainfall warnings, thunderstorm/rainfall advisories, and other severe weather information specific to your area, please monitor products issued by your local PAGASA Regional Services Division.**

Unless re-development occurs, this is the final tropical cyclone bulletin for this tropical cyclone. Succeeding updates on this weather disturbance will be incorporated in the 24-Hour Public Weather Forecast and Weather Advisory to be issued at 4:00 AM and 11:00 AM today, respectively.
